

Energy Dispersive Spectroscopy on the SEM Characterization Facility Policy Statement

EDS training will occur on the JEOL 6500 FEG SEM.

The course “Introductory Scanning Electron Microscopy” is a prerequisite.

The assumption is that you have learned the material in the “EDS on the SEM Primer” prior to the hands-on training.

The training will be one 3-hour period. The class will consist of up to 3 students. As with any course at the Characterization Facility, you can take it on a one-on-one basis: the costs are staff and instrument time.

The Characterization facility front office (626-7594 charfac@umn.edu) can be contacted to schedule the course.
